Assignment 0501 Feedback

Stephen S. Smith   *stephenscottsmith / crashprophet@gmail.com*

1a — One can never issue too many commands **:)** (**+**)

1b — You transcribed your activity accurately and completely. (**+**)

2e — Your byte-level navigation is sufficiently correct with appropriate commentary to demonstrate an understanding of the data structure, although you did miss pointing out the inode of *nonempty.txt*. Also, ideally, it would have been good for you to provide more explicit calculations for everything because in some cases, it is easy to just jump to conclusions because a data block has recognizable data, without knowing how to determine that data block based on directory and inode information. Explicitly stated calculations across the board would put these doubts to rest. Still, I saw enough to be convinced that you knew what you were doing. (**|**)

4d — You were able to use the information presented to find your way around the file system. (**+**)

4e — Commit frequency and messages are appropriate to the work done. (**+**)

4f — Initial version submitted on time, with some adjustments a few days later. (**+**)
